

Colorama NoFire Retardant Solution for Textiles and Raw Wood

General Description

Colorama NoFire Retardant-Solution is colorless water based chemical solution, non-toxic, non-flammable solution. It is used for fire-retardant treatment of textiles and raw wood. Fire Retardant-Solution is water soluble and the treated materials should not be left for extended periods of time outdoor.

In normal conditions and usage it withstands active for more than 12 months such that the treated materials are not washed. One of its advantages is that the treated materials never lose its character and dry within less than one hour.

Storage

Fire Retardant-Solution should be stored in normal warehouse conditions (22 - 25 C°).

Application

The Fire Retardant-Solution is ready made solution and can be applied directly - on non greasy textile or raw wood surfaces. It covers 6-10 m²/liters.

How to use

"Colorama NoFire Retardant-Solution" is applied by using sprayer or brush techniques from "ready to use" containers.
